Riverside Walk Project, Bespoke LED Guidance Lights at Magdalen College

Magdalen College was founded in 1458 by William Waynflete. Their rich history gives them many traditions but they also have pride in their modern and progressive outlook. Addisons walk is a picturesque footpath surrounding a small island in the River Cherwell situated within the grounds of Magdalen College.

Magdalen College has some of the most hauntingly beautiful buildings of Oxford and sits amid a hundred acres of woodlands, riverside walks and lawns. With this beauty needing to be preserved, Magdalen College asked Zeta Specialist Lighting whether they could enhance the appearance of the footpath along Addisons walk and add to safety by illuminating the odd hazard such as tree roots.

In response **Zeta Specialist Lighting** offered Magdalen College a bespoke, low powered, **LED Guidance Light**. Magdalen College formerly had many low level teak light posts to define paths but nothing fancy to compliment the surroundings. At just 1000mm above ground, Zeta's LED lights would not be unsightly or spoil the riverside view.

The guidance lights consisted of low powered, bright, rugged LED lights encased in a stainless steel body. With a lifetime of **50,000 hours**, Zeta's LED lights are guaranteed to last with little or no maintenance. The LED lights were placed within quality hardwood to ensure a long span whilst blending well with their surroundings. **Zeta** positioned the guidance lights evenly along the pathway of Addisons walk and ensured the LEDs were angled appropriately to illuminate the whole pathway and bring to light the beauty of the footpath.

Staff and students are very pleased with Zeta's **bespoke solution** and they are enjoying the benefits. The splendour of Addisons walk can now be enjoyed from dusk to dawn and during dark winter months.
