## Specialist Lighting

### Mercedes Benz go LED

Zeta Specialist Lighting worked in conjunction with NIS Signs to provide a solar powered LED illuminated sign for Mercedes Benz.

Zeta carefully calculated a specific solar system for the sign and provided NIS Signs with the internals. This allowed the client to have a customer specific timed illumination of the lettering that avoided paying a large cost associated with the mains connection.

The PS800 Controller used for this project, is specifically designed and produced by Zeta for the UK Solar Lighting Systems. Zeta are now the market leader within the UK, for this type of system and with over 4000 installed, the reliable data collected means Zeta can design all varieties of systems to work efficiently in this country.

Alex Collett of Zeta says *"The Zeta PS800 control system, allows us to confidently specify the correct amount of solar, lighting and batteries on this type of project"*

The Mercedes Benz AMG Flagship sign is now mounted at the new driving experience centre at Silverstone.
